Subnet information			Number of terminals in the net	
Adress space	Subnet mask	Size	actually	Description

### Information for the new IP-adress-space

Because of public IP- address-space is only available limited, it is necessary to constitute your allocation as accurately as possible. It will be checked if you need official IP-address-space or if private IP-addresses are enough maybe. Please check if your project could be realized with private IP-addresses.

Are private IP-addresses a possible alternative for your intension?

yes    no    I don´t know, need advice.

Do you give back the non-needed IP-addresses?

yes    no    I have no IP-address yet.

If you marked 'Yes', please indicate here the return of the planed IP´s.

Address space	no later than	Provider

Please indicate your planed IP-address-space.

Size	Actually	In one year	In two years	Description

Kindly note that we need a network plan for larger IP requests, if the net was not planed by us. From experience we know that RIPE will not allocate IP-addresses, which are planed for individual virtually webserver. Several webserver can be conducted with one IP-address and the log HTTP 1.1.

If the criteria which you have given will change, the allocation of the IP-addresses will become invalid. The allocation of IP-addresses only ensued by the standard guidelines of RIPE.
